

How science research works?

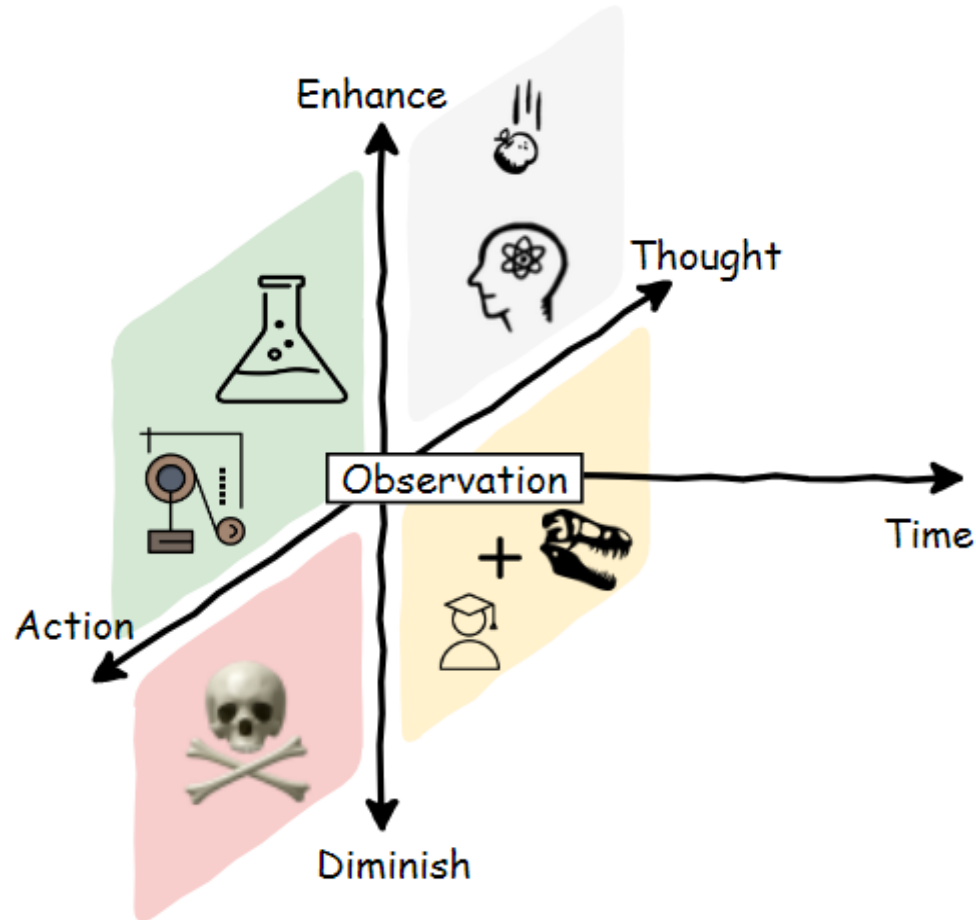

# A simple model of scientific research

## A) Curiosity

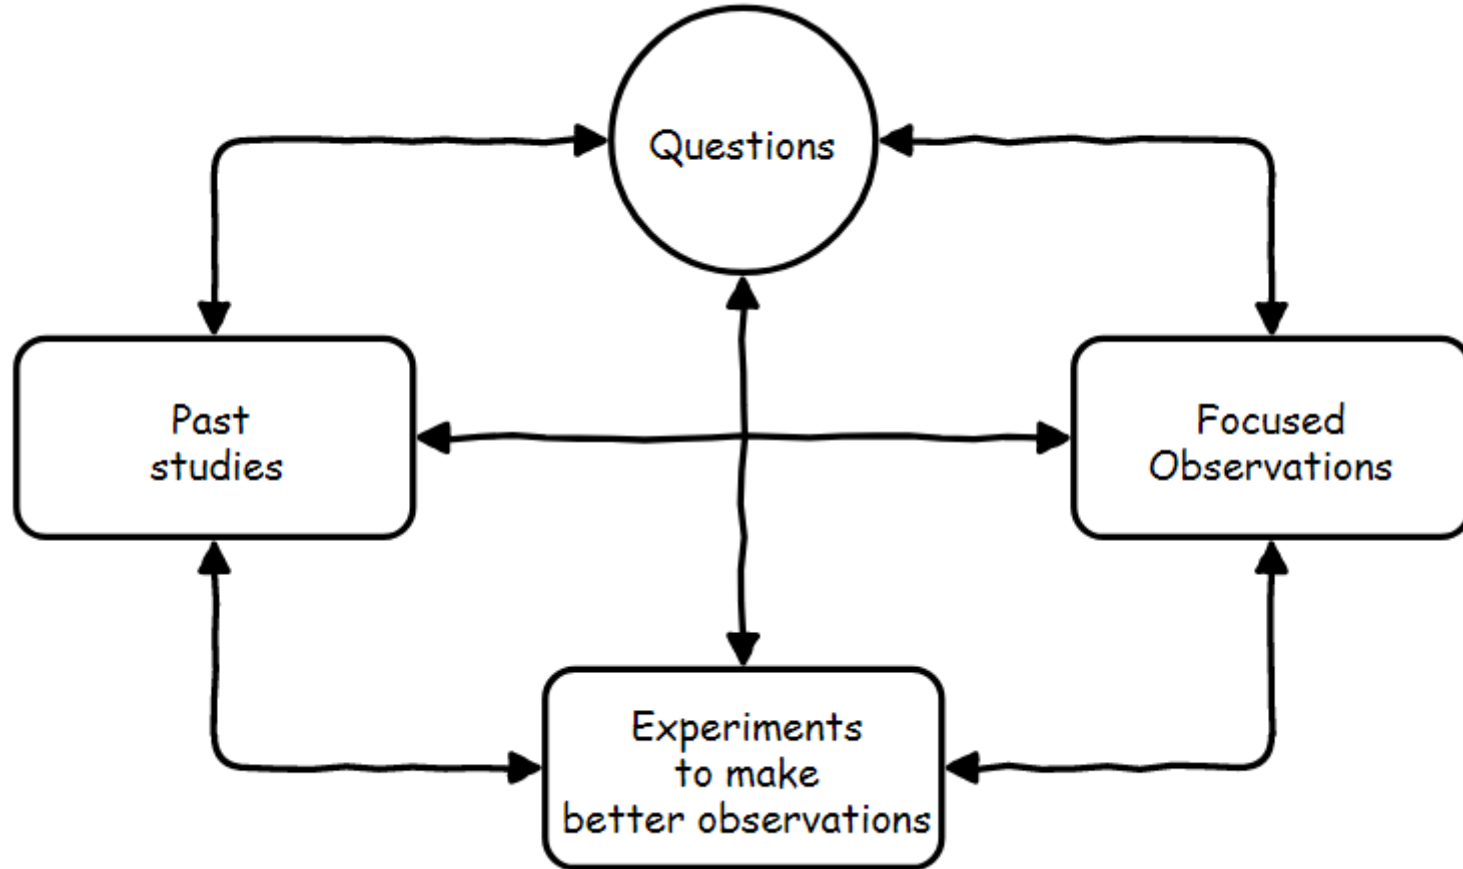

# A simple model of scientific research

## B) Action & Thought

A simple model of scientific research  
C) Gathering information

# A simple model of scientific research

D) Overwhelming information

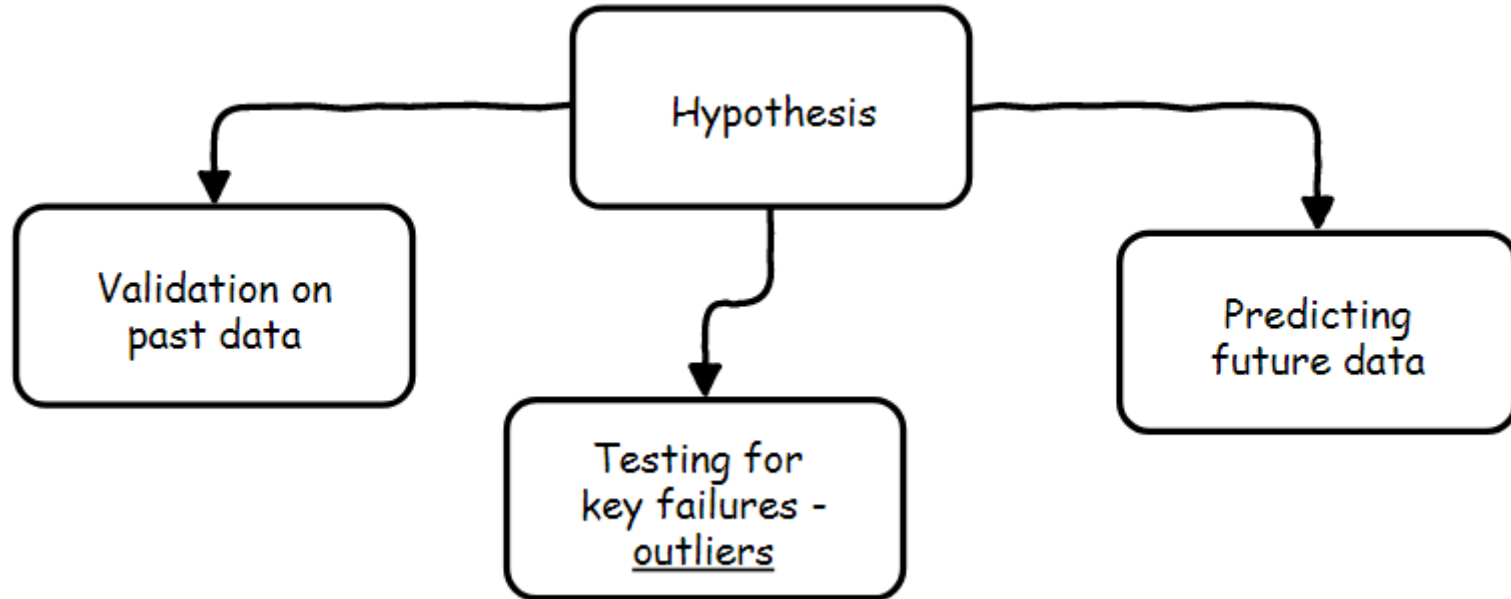

# A simple model of scientific research

E) Hypothesis

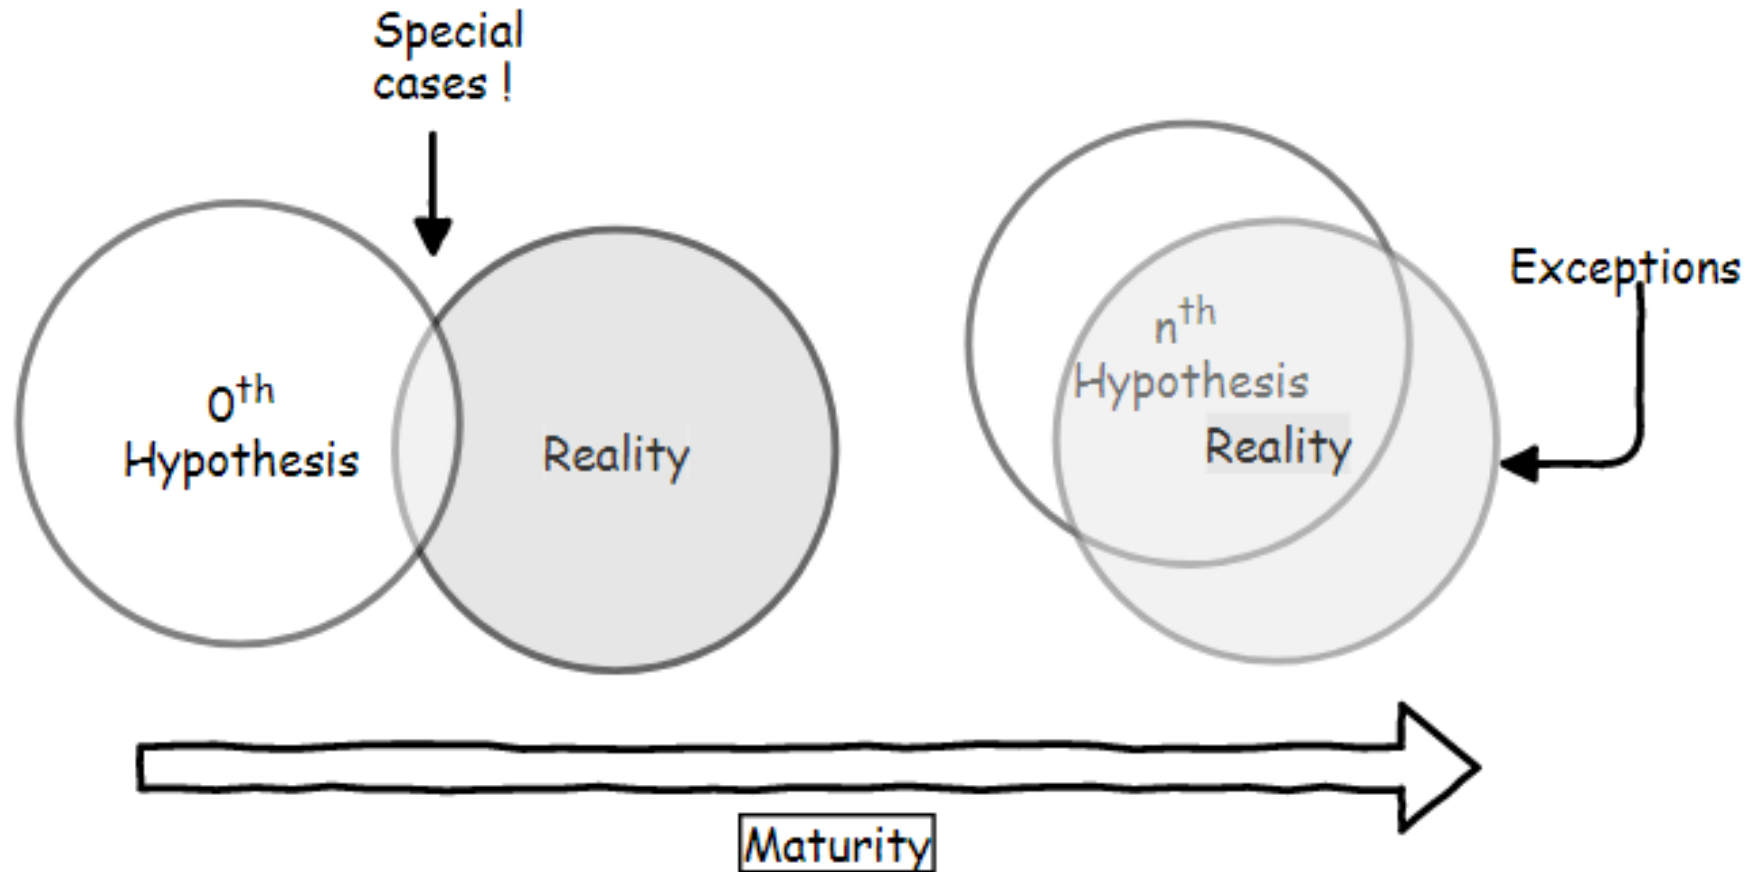

# A simple model of scientific research

## F) Hypothesis testing

# A simple model of scientific research

## G) "Normal science"

# A simple model of scientific research

H) The path ahead...

**What You Know vs How much you know about it**

credits : anonymus (maybe PHDcomics.com)

# Why is it necessary to teach science?

- To know and understand the world
- To be able to use tools and make practical guesses
- To generate scientific spirit
- To be able to address problems surrounding us
- To research and give back to society

# How is science taught in India?

- Learn and remember works of others
- Science instruments are costly, so don't bother
- Know that science is tough and needs lots of math
- Science is too serious to be enjoyable
- Mug up and spit-out in exams, and forget!
- Getting science degrees gets jobs
- Science degree necessary for competitive systems

# How it should be taught?

- Focus on curiosity - the blood of science
- Asking genuine questions on everyday stuff
- Information only after sufficient questioning
- Mathematical rigor < generation of curiosity
- Play with science and scientific tools

# How to get into science?

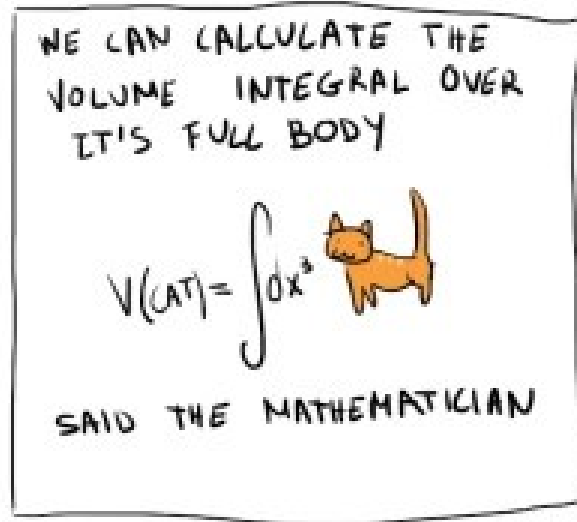

- Institutional : graduation, PG, etc.
- Extra-institutional : very difficult in India
- Collaborative projects : liberal arts approach!

# *The structure of scientific revolutions - T.S. Kuhn*

- **Normal science** - discover uses of current tools
- **Crisis** - normal science Vs. too many anomalies
- **Extraordinary science** - new tools, more problems!
- **Exemplar**: One shows the way, others perfect it.

# Language of science (a joke)

## HOW TO CALCULATE THE VOLUME OF A CAT ?

# Language of science (Not a joke)
